

Do It Differently

What
Is the Tailwind System?...

The
Tailwind System is a product born from nearly 30 years of experience in the laundry and drycleaning business. The Tailwind Shirt System was originally developed for shirt laundries as a means to add sanity to a department that is often difficult to control and rarely adds much to the bottom line. This system was so dramatically effective that users created a demand for the Tailwind System for Drycleaning and Firestorm – the Tailwind System for Restoration.

The
Million Dollar Questions...

How
does it work? Tailwind is a combination of the best parts of a "piece" system (No-Waste tags, computer-printed tags, 7-up Tags) and the best parts of a "lot" system while discarding the less desirable parts of those two systems. The result is a truly advanced lot system that has every benefit that you wish for and no drawbacks. In the end, you get fast, efficient, stress-free and mistake-proof assembly. Fast, Efficient, Stress-Free, Mistake-Proof

Why
does it work? Tailwind is a lot system made visual, therefore manageable. This is an important difference. Tailwind remains manageable throughout the processes in a plant by maintaining lot integrity all the time - during mark-in, pre-spotting, cleaning, post-spotting and pre-inspection. Now garments need to go to the pressers - still manageable and organized! Then comes the inspection, assembly and bagging - a Tailwind lot is still organized and manageable. A garment that needs to be re-cleaned still maintains lot integrity even when the rest of the lot is finished and assembled! Now that is an organized lot system!
Tailwind remains manageable throughout the processes in a plant by maintaining lot integrity. What are the benefits? Tailwind saves you money by creating the ultimate in organization. It is extremely effective at reducing labor and eliminating errors and waste. The Tailwind System is full of checks and balances that afford you the management and organization that you have always dreamed of. This organization translates into reduced staff.

With the
organizational foundation that has remained in place throughout the process and the speed at which orders can be assembled, the number of people needed for assembly is always reduced. Even with only one assembler, substantial savings become evident as they use so little time actually assembling orders that they must be assigned other related duties to avoid being seriously under-utilized. Tailwind saves money by creating the ultimate in organization, reducing labor and eliminating errors and waste. The average Tailwind Shirt System user saves over \$17,000 per year in labor, and even more for the average user of the Tailwind

System for Drycleaning and larger operators save over 6 figures! This is a savings that continues year after year with a proven system that works 100% of the time!
